

[Name of Document] Abstract

It is an object of the present invention to realize sure electrical connection between a contactor and an object to be inspected without influenced by heat, a reduction in the pre-heating time, and an enhanced
5 throughput.

A probe card of the present invention includes a contactor, a printed wiring board, an interposer provided between the contactor and the printed wiring board to have the both in elastic and electrical contact with each other, a coupling member integrating these, and a reinforcing member reinforcing
10 the printed wiring board integrated via the coupling member.
